NutriLife

Healthy Food & Nutrition Website

HTML and CSS Project Report

A responsive informational website presenting healthy food categories, simple recipes, a sample daily meal plan, and everyday eating tips.

1. Introduction

NutriLife is an educational healthy-food and nutrition website. It brings together practical food categories, three example recipes, a sample daily meal plan, and simple healthy eating tips in a clean, easy-to-navigate layout. The page is built using HTML for structure and embedded CSS for appearance and responsiveness.

2. Project Objectives

The project aims to organize nutrition-related information into clear sections, make recipes and their ingredient lists easy to read, present a daily meal schedule in a table, and create a layout that works on both desktop and mobile screens.

3. Tools and Technologies

HTML5 defines the webpage structure, including the header, navigation, sections, recipe cards, lists, meal-plan table, and footer. CSS3 controls colors, typography, spacing, grid layouts, hover effects, and mobile adaptation. The page uses externally hosted images for its recipe cards. No JavaScript is present in the supplied source code.

4. Website Features

Navigation and hero

A green header links to the Home, Categories, Recipes, Meal Plan, and Health Tips sections. The hero introduces the site and provides an Explore Recipes link.

Food categories

Four cards describe vegetables, fruits, whole grains, and protein foods.

Healthy recipes

Fresh Vegetable Salad, Fruit Oatmeal, and Vegetable Lentil Soup are shown with short descriptions, estimated calories, ingredients, and preparation instructions.

Sample meal plan

A table presents breakfast, morning snack, lunch, evening snack, and dinner suggestions with their nutrition focus.

Healthy eating tips

Four tip cards encourage drinking water, eating varied foods, choosing balanced meals, and enjoying fresh home-cooked foods.

Responsive design

CSS Grid adapts card columns to available width; a media query adjusts header, navigation, hero text, section spacing, and table scrolling on smaller screens.

5. HTML Structure

The document begins with the HTML5 doctype, language, character encoding, viewport, and title. A header and navigation bar are followed by a hero, category cards, recipe cards, a meal-plan table, health tips, and a footer. Section IDs enable in-page navigation links.

6. CSS Styling

The design uses green and off-white tones to support a fresh visual identity. Flexbox aligns the header and hero content, while CSS Grid arranges category, recipe, and tip cards. Rounded corners, shadows, hover transitions, and consistent padding improve readability and visual organization. The mobile media query is set at 650 pixels.

7. Development Process

First, the page sections and content were organized in HTML. Next, CSS rules were added for typography, colors, card layouts, and the meal-plan table. Navigation links were connected to section IDs. Finally, responsive rules were applied for narrow screens, including horizontal scrolling for the table when necessary.

8. Advantages

The website is simple to understand, lightweight, and easy to update. It separates content into clear sections, offers readable recipe instructions, and adapts its layout to smaller screens without requiring a JavaScript framework.

9. Limitations

The recipe calories are approximate examples rather than personalized nutritional calculations. The sample meal plan is general information, not a tailored dietary plan. The website has no account system, search function, database, or interactive meal planner. Recipe images depend on external image URLs and may not load

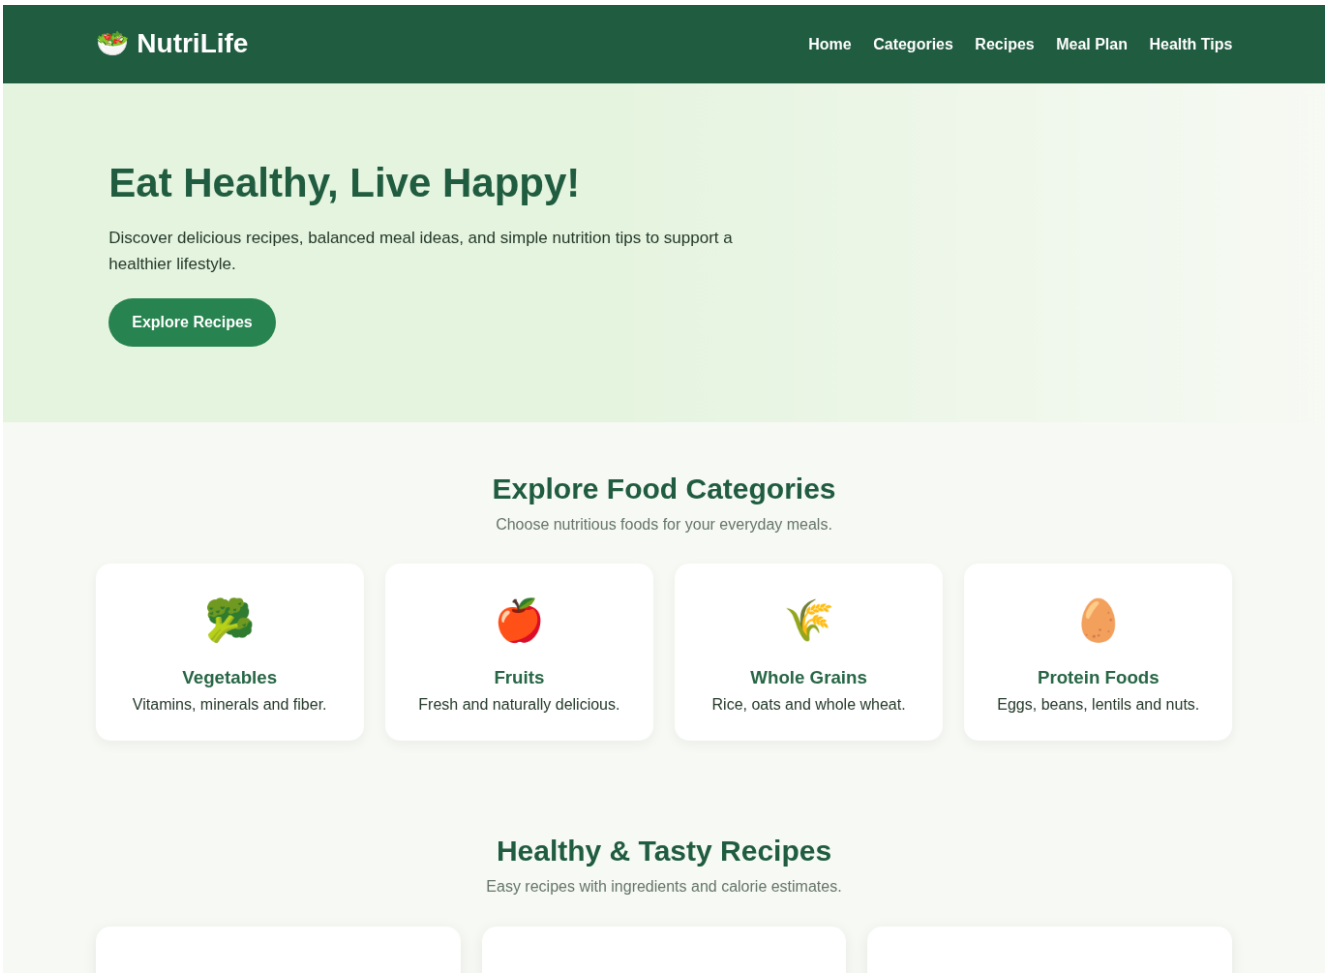

without internet access.

10. Conclusion

NutriLife demonstrates how HTML and CSS can be used to build an organized, responsive informational website. It combines food guidance, recipes, a meal-plan table, and healthy eating tips in a consistent design, making it suitable as a beginner web-development project.

11. Website Output

The following is a browser-rendered preview generated from the supplied HTML file. Image availability depends on external image hosting; this is not a separately uploaded screenshot.

Fresh Vegetable Salad

A refreshing mix of colorful vegetables.

Approx. 180 kcal / serving

Ingredients:

- Cucumber
- Tomato and carrot
- Lettuce and lemon juice

Preparation: Chop all vegetables, mix together and add lemon juice.

Fruit Oatmeal

A simple breakfast with fiber and fruit.

Approx. 300 kcal / serving

Ingredients:

- ½ cup oats
- Milk or fortified alternative
- Banana and apple pieces

Preparation: Cook oats with milk and top with chopped fruit.

Vegetable Lentil Soup

A warm meal with plant-based protein.

Approx. 250 kcal / serving

Ingredients:

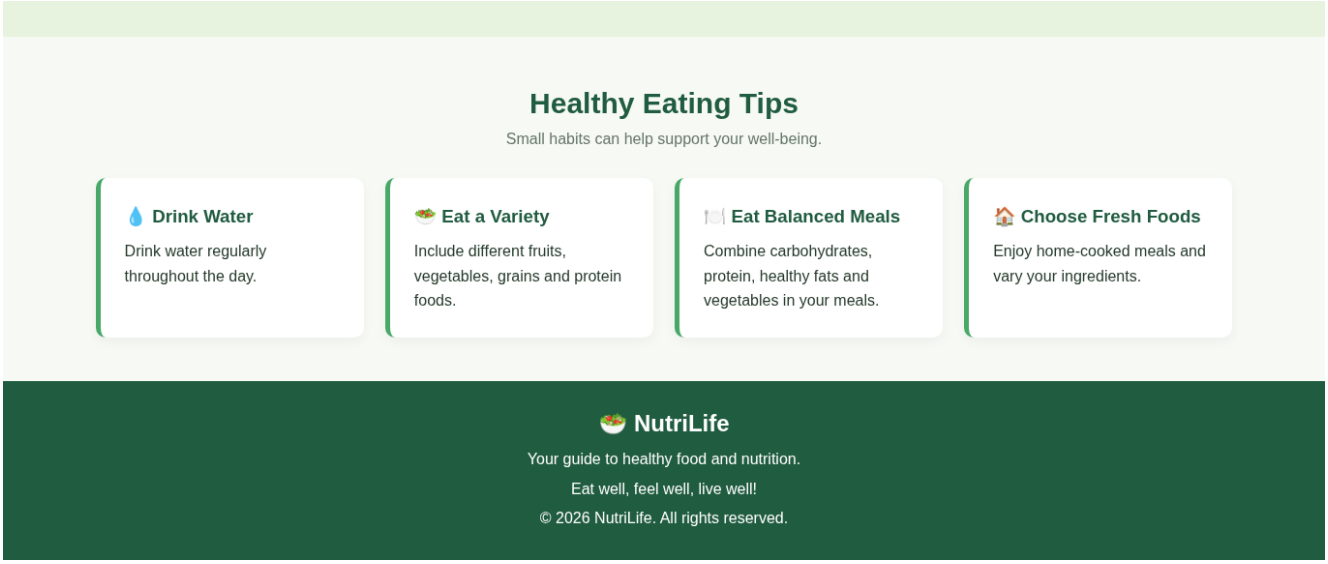

- ½ cup lentils
- Carrot and tomato
- Water and mild spices

Preparation: Cook lentils and vegetables until soft, then season to taste.

Sample Daily Meal Plan

Simple ideas for a balanced day of eating.

Meal	Food Suggestions	Nutrition Focus
Breakfast	Oats, milk and fruit	Fiber and calcium
Morning Snack	Seasonal fruit and nuts	Vitamins and healthy fats
Lunch	Rice or roti, dal and vegetables	Carbohydrates, protein and fiber
Evening Snack	Roasted chickpeas or yogurt	Protein and calcium
Dinner	Roti, vegetable curry and dal	A variety of nutrients

Healthy Eating Tips
Small habits can help support your well-being.
💧 Drink Water
Drink water regularly throughout the day.
🥗 Eat a Variety
Include different fruits, vegetables, grains and protein foods.
🍽️ Eat Balanced Meals
Combine carbohydrates, protein, healthy fats and vegetables in your meals.
🏠 Choose Fresh Foods
Enjoy home-cooked meals and vary your ingredients.
🥗 NutriLife
Your guide to healthy food and nutrition.
Eat well, feel well, live well!
