CAREPLUS HOSPITAL

Healthcare Services Website — Project Report

HTML & CSS Website Development

Includes full source code and website output preview

1. Introduction

CarePlus Hospital is a responsive educational healthcare website designed to present hospital departments, doctor profiles, facilities, visiting hours, appointment request fields, and contact information in a clear layout. The project uses HTML for page structure and CSS for visual presentation.

2. Project Objectives

• Provide an easy-to-navigate hospital information website.

• Display department and doctor information using reusable cards.

• Present visiting hours in a structured table.

• Offer a sample appointment request form with accessible labels and HTML validation.

• Make the layout adapt to desktop and mobile screens.

3. Technologies Used

HTML5: Defines semantic sections, navigation links, cards, tables, form fields, and footer. CSS3: Styles colors, spacing, typography, responsive grids, hover states, focus outlines, and mobile breakpoints. This report excludes the original JavaScript section as requested; the preview also uses the HTML-and-CSS-only version.

4. Website Features

Header and navigation: Links jump to Home, Departments, Doctors, Facilities, Visiting Hours, Appointment, and Contact.

Hero and emergency banner: A welcoming headline and a prominent emergency notice appear near the top of the page.

Hospital departments: Six cards describe Cardiology, Neurology, Orthopedics, Pediatrics, General Medicine, and Diagnostics.

Doctor profiles: Three sample doctor cards contain portraits, names, and specialties.

Facilities: Cards describe emergency care, patient rooms, laboratory services, and pharmacy.

Visiting hours: A three-column table lists sample outpatient, visiting, and emergency timings.

Appointment request: Form fields include name, phone, email, department, preferred date/time, and optional reason for visit.

Contact and footer: Contact placeholders, emergency guidance, and a website footer complete the page.

5. Development Process

• Plan the information architecture and page sections.

• Write semantic HTML elements and anchor navigation.

• Add CSS for a blue healthcare theme, cards, grid layouts, and forms.

• Add responsive rules for screens up to 650 px wide.

• Open the HTML page in a browser and inspect the rendered output.

• Review accessibility labels, input requirements, and demonstration disclaimers.

6. Advantages

The website is simple to run locally, visually consistent, responsive, easy to navigate, and straightforward to modify. HTML form attributes provide basic client-side validation without requiring a server.

7. Limitations

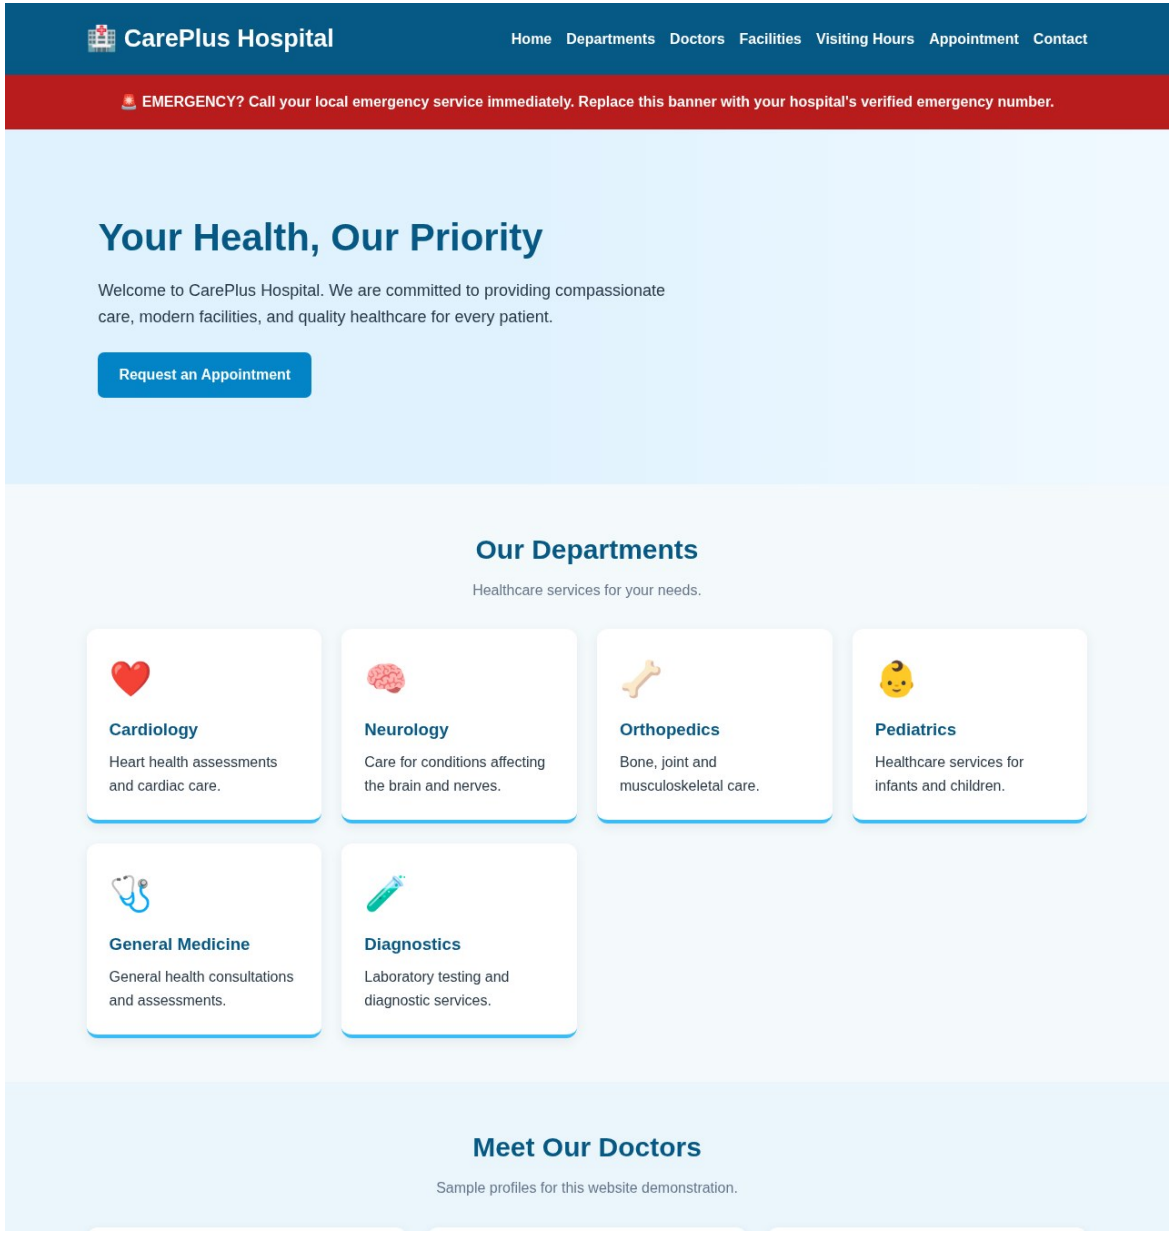

This is an educational demonstration, not a working hospital system. Doctor profiles, hours, and contact fields are examples. The appointment form does not submit or store requests. With JavaScript excluded, the original dynamic minimum-date setting and demonstration submit-message behavior are not available. External doctor photos require an internet connection.

8. Conclusion

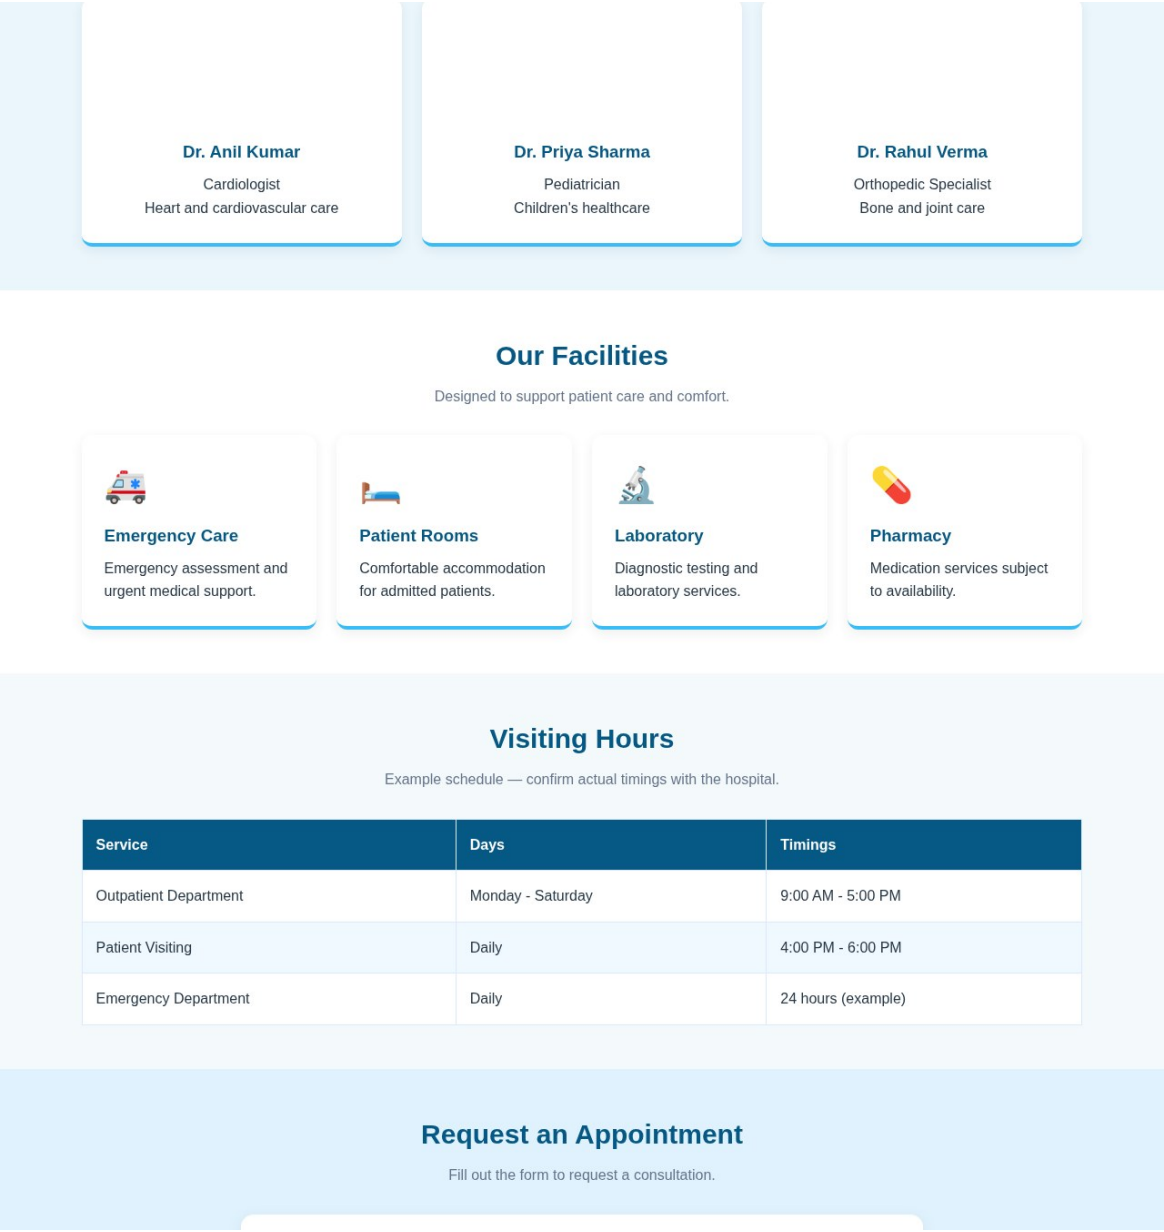

The CarePlus Hospital project demonstrates how HTML and CSS can be combined to build an organized, responsive healthcare information website. A production version would require verified hospital information, secure appointment processing, privacy safeguards, and a connected backend.

9. Website Output Preview

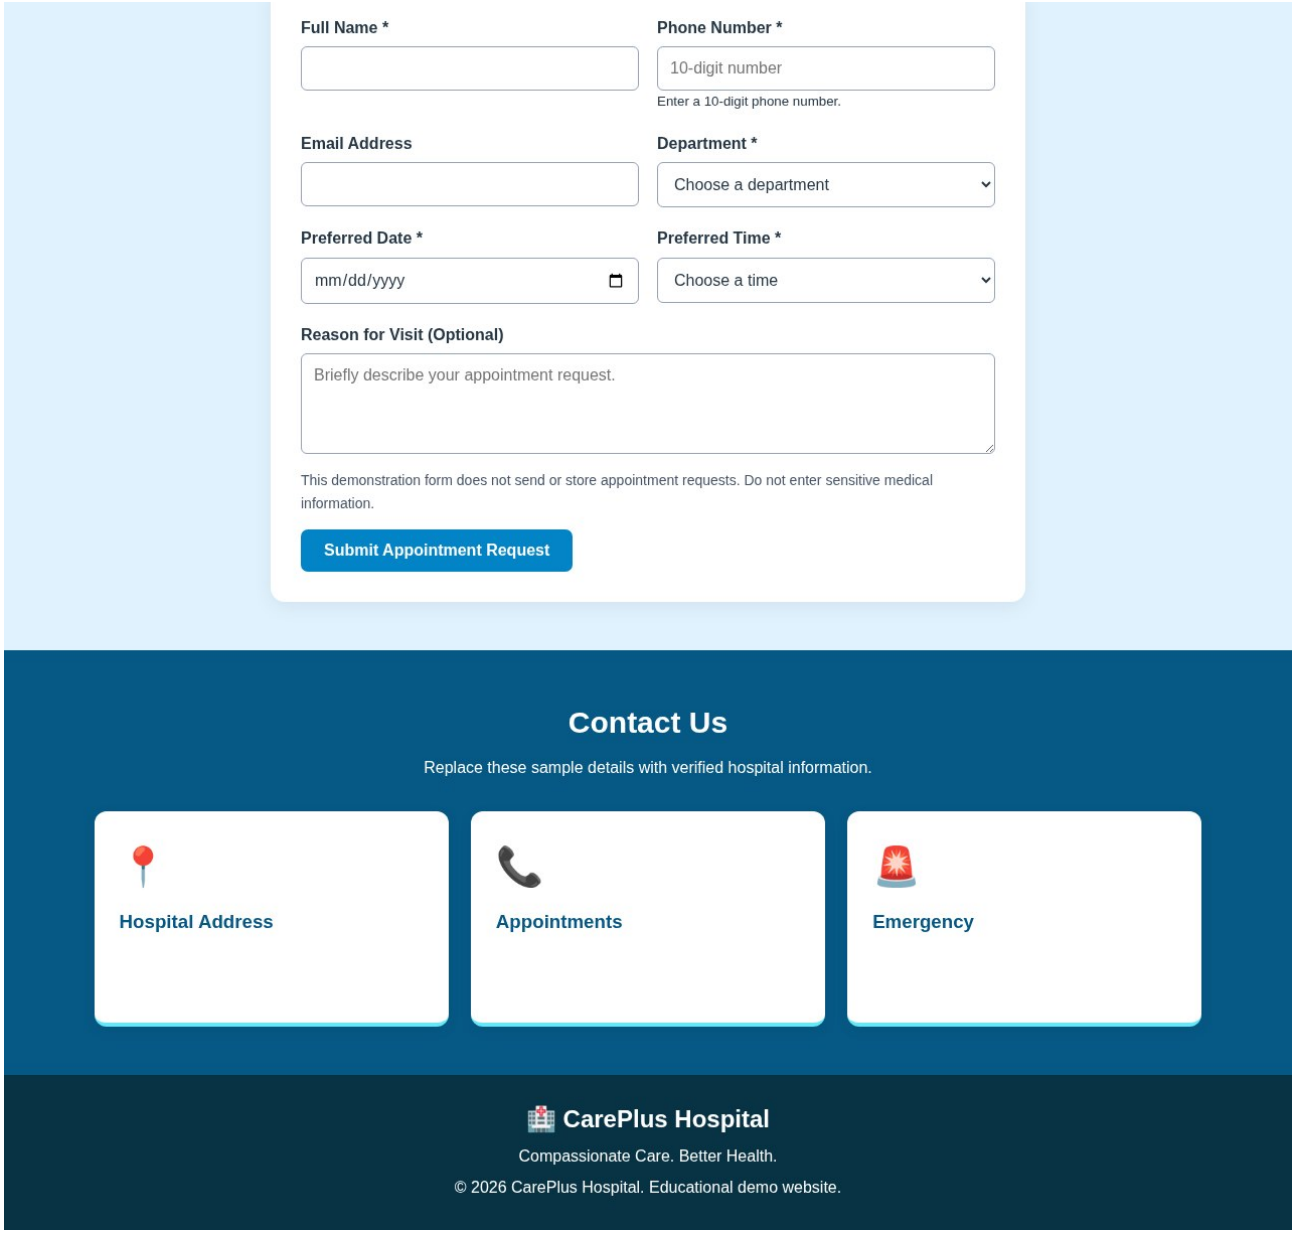

The following preview was generated from the supplied HTML file with the JavaScript section removed. Images loaded from external sources may vary depending on network availability.

Website output — part 1 of 3

Website output — part 2 of 3

Website output — part 3 of 3

10. Complete HTML and CSS Source Code (JavaScript Excluded)

The complete HTML document and embedded CSS are reproduced below without shortening. The original script block is intentionally omitted.
